Restriction to one of the following inventions is required under 35 U.S.C.

121:

- I. Claims 1-10, drawn to a rail assembly, classified in class 182, subclass 180.2.
- II. Claims 11-17, drawn to a reinforcing strut, classified in class 182, subclass 217.
- III. Claims 18-24, drawn to a ladder hinge and rail assembly, classified in class 182, subclass 21.
- IV. Claims 25-27, drawn to a ladder, classified in class 182, subclass 163.

The inventions are distinct, each from the other because of the following reasons:

Inventions I;III;IV and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as a reinforcing means for a ladder rung not having inner and outer rails or Ladder having a hinge assembly. See MPEP § 806.05(d).

Inventions I and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has

separate utility such as a rail assembly usable with a ladder without a hinge assembly. See MPEP § 806.05(d).

Inventions III and I are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination, as set forth in claim 18 does not require a rail assembly having inner and outer rails. The subcombination has separate utility such as a rail assembly for a ladder not having a hinge assembly.

Inventions III and IV are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination, as set forth in claim 18 does not require a hinge with a biased protruding member. The subcombination has separate utility such as a ladder with

a rail assembly enabling a combination ladder design.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
